Listing of the Claims

Please cancel Claims 6-7, 14-15 and 17-21. Please amend Claims 1-4 and 9-12, as follows:

1.   **(Currently Amended)** A method in a computer system for generating a display page, the method comprising:

receiving a request to **generate** ~~present~~ a display page**, wherein**

the display page comprises realtime information and non-realtime

information,

realtime information comprises information capable of being

retrieved or generated without significant delay, and

non-realtime information comprises information for which retrieval

or generation will result in significant delay;

retrieving **the** realtime information to be included on the **requested** display page;

if a previously cached version of the non-realtime information is available,

generating the requested display page comprising the retrieved

realtime information and the previously cached non-realtime

information; and

if a previously cached version of the non-realtime information is not

available,

generating the requested display page comprising the retrieved

realtime information and an indication that the non-realtime

information is not yet ready for display,

requesting generation of the non-realtime information,

caching the generated non-realtime information, and

generating the requested display page comprising the retrieved

realtime information and the cached non-realtime information

in response to a subsequent request for the requested display

page.

~~requesting that a computation be performed to generate non-realtime~~

~~information to be included on the display page;~~

- 2 -

creating a display page that contains the retrieved realtime information and
an indication that the non-realtime information is not yet ready to be
included on the display page; and

sending to a user computer system the created display page for displaying to
a user

wherein when the display page is next requested, the created display page
includes the non-realtime information if the computation has been
completed.

2. **(Currently Amended)** The method of claim 1 wherein said generating the requested display page comprising an indication that the non-realtime information is not yet ready for display further comprises:

including the indication that the non-realtime information is not ready to be
included on the display page includes a link for requesting the display
page.

3. **(Currently Amended)** The method of claim 1 wherein the request to generate present the display page is received from a user.

4. **(Currently Amended)** The method of claim 1 wherein the request to generate present the display page is received when a user logs on to one of the computer system and a client coupled to the computer system.

5. (Original) The method of claim 4 wherein the display page is a homepage.

6-7. **Canceled.**

8. (Original) The method of claim 1 wherein the generated information includes a graphical representation of information.

9. **(Currently Amended)** A computer system for generating a display page of business information, comprising:

a component **configured to retrieve** ~~that retrieves~~ realtime business information to be included on the display page;

a component **configured to request performance of** ~~that requests that~~ a computation ~~be performed~~ to generate non-realtime business information to be included on the display page **and to cache the generated non-realtime business information**;

a component configured to,

if a cached version of the non-realtime business information is available, generate the display page comprising the realtime business information and the cached non-realtime business information, and

if a cached version of the non-realtime business information is not available,

generate the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display,

request generation of the non-realtime information,

cache the generated non-realtime information, and

generate the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page; and

~~a component that adds to the display page the retrieved realtime business information, when the non-realtime business information is not yet ready, an indication that the non-realtime business information is not yet ready to be included on the display page, and when the non-realtime business information is ready, the generated non-realtime information; and~~

a component **configured to send** ~~that sends~~ to a user computer system the display page for display to a user so that the user can view the realtime

- 4 -

information **if** ~~even though~~ the non-realtime business information is not yet ready.

10. **(Currently Amended)** The computer system of claim 9 wherein the component configured to generating the requested display page comprising an indication that the non-realtime information is not yet ready for display is further configured to include ~~the indication that the non-realtime business information is not ready to be included on the display page includes~~ a link for requesting the display page.

11. **(Currently Amended)** The computer system of claim 9 wherein a request to **generate** ~~present~~ the display page is received from a user.

12. **(Currently Amended)** The computer system of claim 9 wherein a request to **generate** ~~present~~ the display page is received when a user logs on to **one of** the computer system **and a client coupled to the computer system**.

13. (Original) The computer system of claim 12 wherein the display page is a homepage.

14-15. **Canceled.**

16. (Original) The computer system of claim 9 wherein the generated business information includes a graphical representation of the business information.

17-21. **Canceled.**

22. **(New)** The method of Claim 1 further comprising:
if a previously cached version of the non-realtime information is available,
   requesting re-generation of the non-realtime information subsequent to
      said generating the requested display page comprising the
      previously cached non-realtime information,
   caching the re-generated non-realtime information, and

- 5 -

generating the requested display page comprising the retrieved realtime information and the cached re-generated non-realtime information in response to a subsequent request for the requested display page.

23.   (New) A computer-readable storage medium comprising program instructions executable to:

receive a request to generate a display page, wherein

the display page comprises realtime information and non-realtime information,

realtime information comprises information capable of being retrieved or generated without significant delay, and

non-realtime information comprises information for which retrieval or generation will result in significant delay;

retrieve the realtime information to be included on the requested display page;

if a previously cached version of the non-realtime information is available,

generate the requested display page comprising the retrieved realtime information and the previously cached non-realtime information; and

if a previously cached version of the non-realtime information is not available,

generate the requested display page comprising the retrieved realtime information and an indication that the non-realtime information is not yet ready for display,

request generation of the non-realtime information,

cache the generated non-realtime information, and

generate the requested display page comprising the retrieved realtime information and the cached non-realtime information in response to a subsequent request for the requested display page.
